Project Title: Deploy a Static Website on AWS using Amazon S3 and CloudFront

Date: 02 July 2026

Project Overview

This project demonstrates how to deploy a static website using Amazon S3 and Amazon CloudFront. The website files were uploaded to an S3 bucket configured for static website hosting. CloudFront was used to distribute the website globally and improve performance. The website is publicly accessible through both the S3 Website Endpoint and the CloudFront Distribution URL.

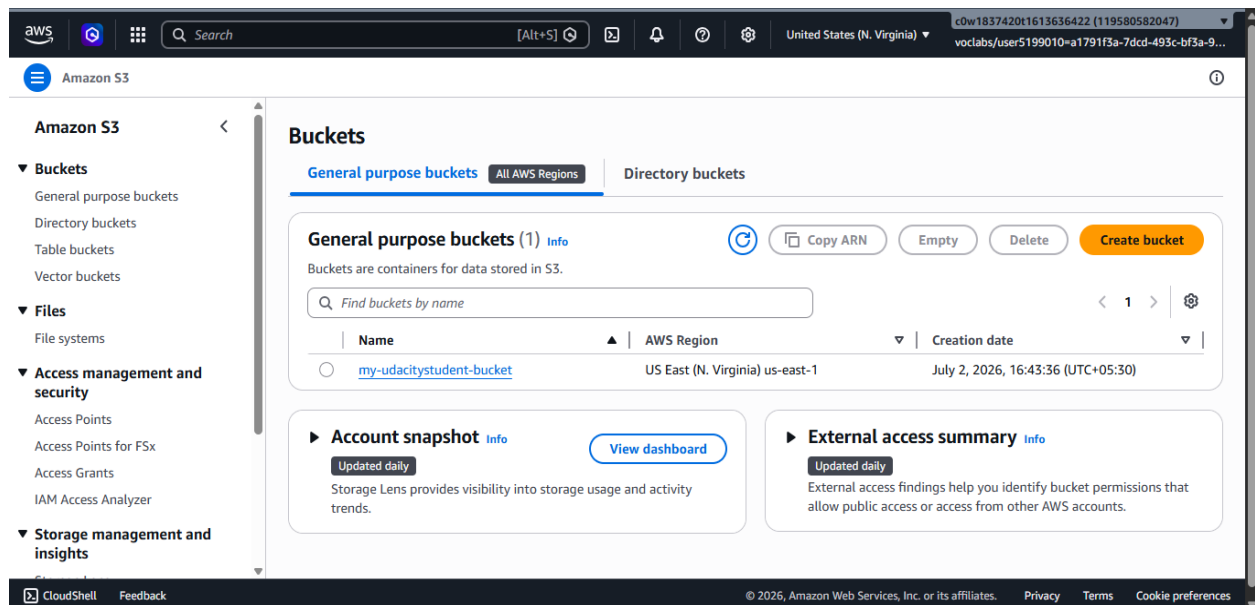

Website Files

1. S3 Bucket Creation

Description:

Created a new Amazon S3 bucket for hosting the static website.

Screenshot: S3 Bucket created in AWS Console

2. Website Files Uploaded

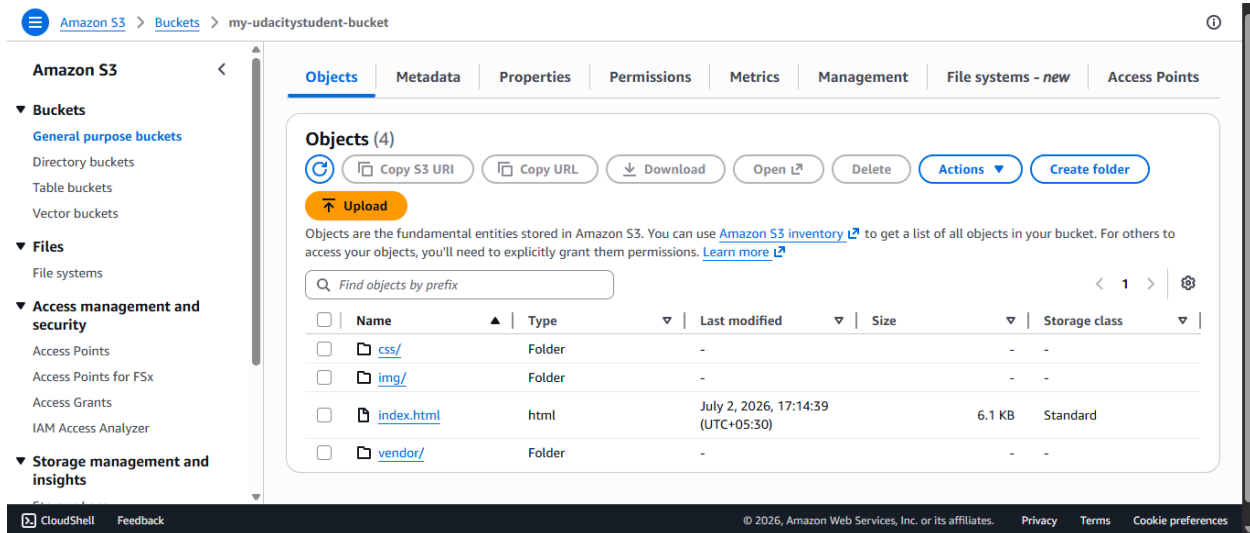

Description:

Uploaded all required website files to the S3 bucket.

Files include:

- index.html
- css/
- img/
- vendor/

Screenshot: Website files inside the S3 bucket

3. Static Website Hosting

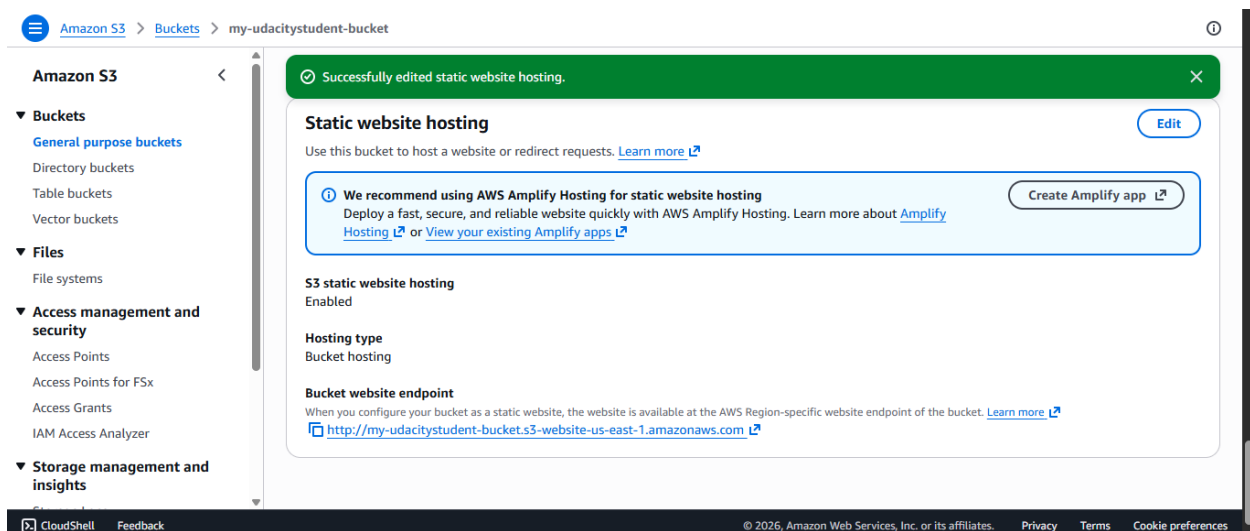

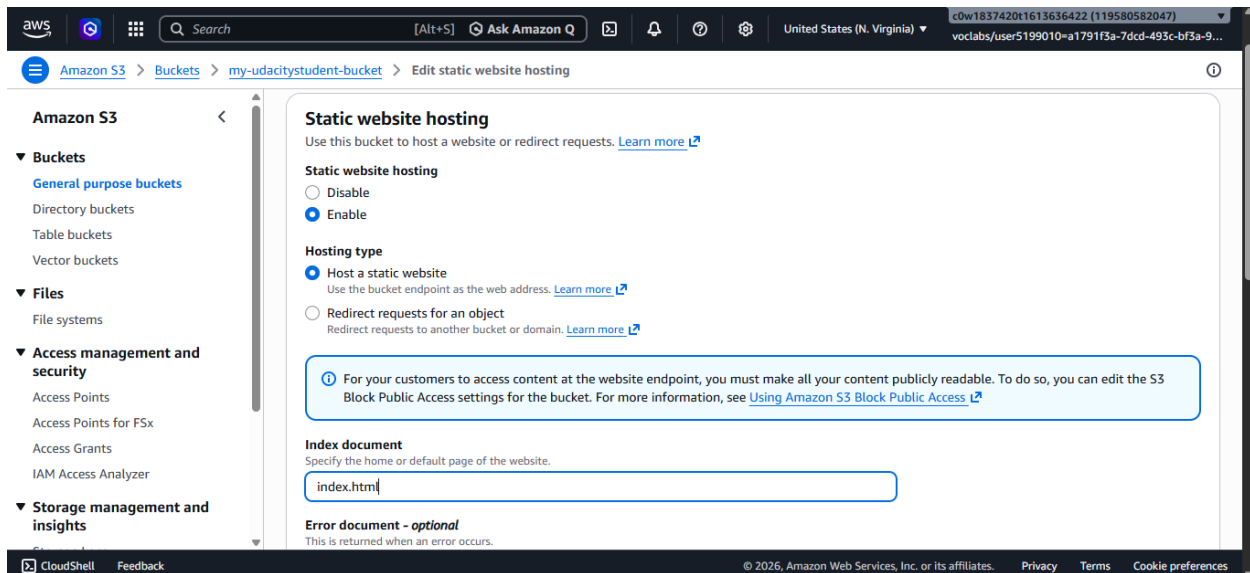

Description:

Enabled Static Website Hosting.

Configuration:

- Hosting Type: Bucket Hosting
- Index Document: index.html
- Error Document: index.html

Screenshot: Static Website Hosting configuration

4. Bucket Permissions

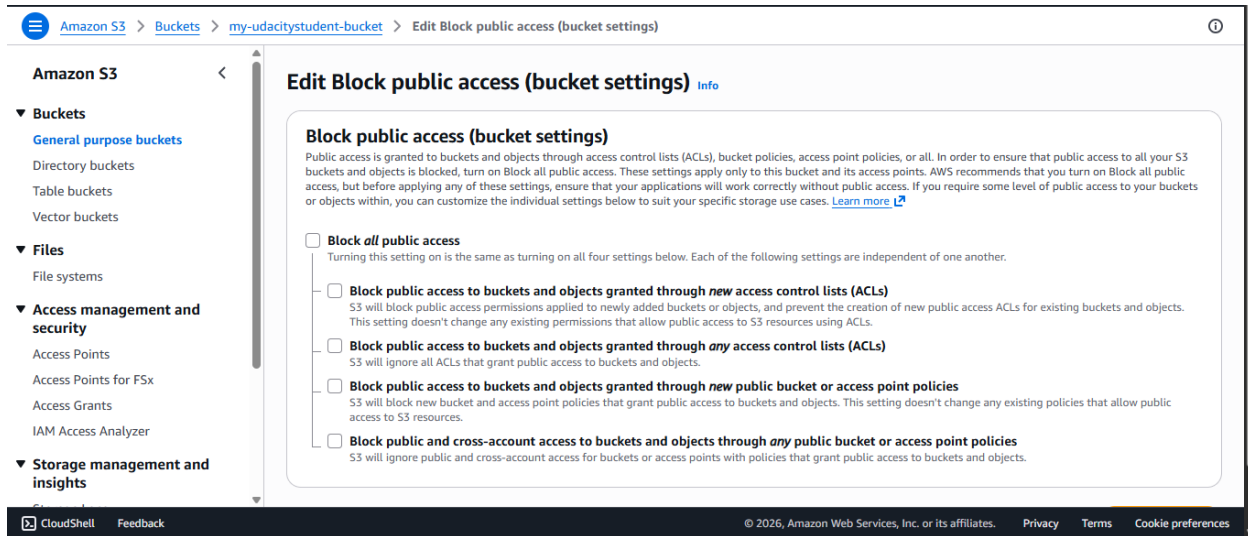

Description:

Configured the bucket to allow public access.

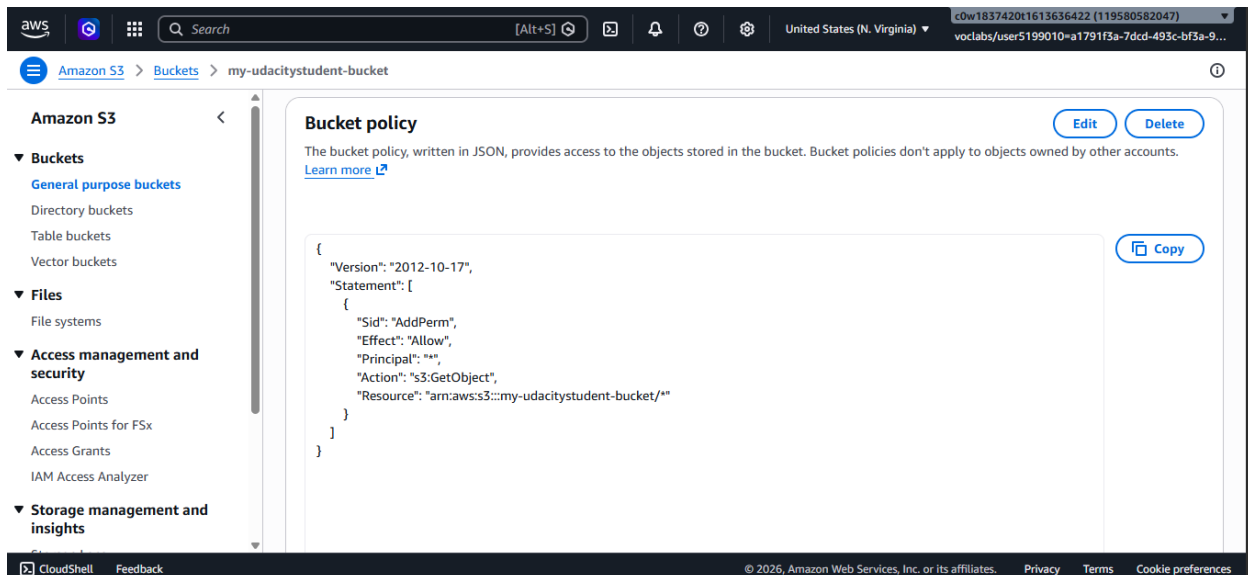

Actions performed:

- Disabled Block Public Access
- Added Bucket Policy allowing public read access

Screenshot: Block Public Access settings

Screenshot: Bucket Policy

Website Distribution

5. CloudFront Distribution

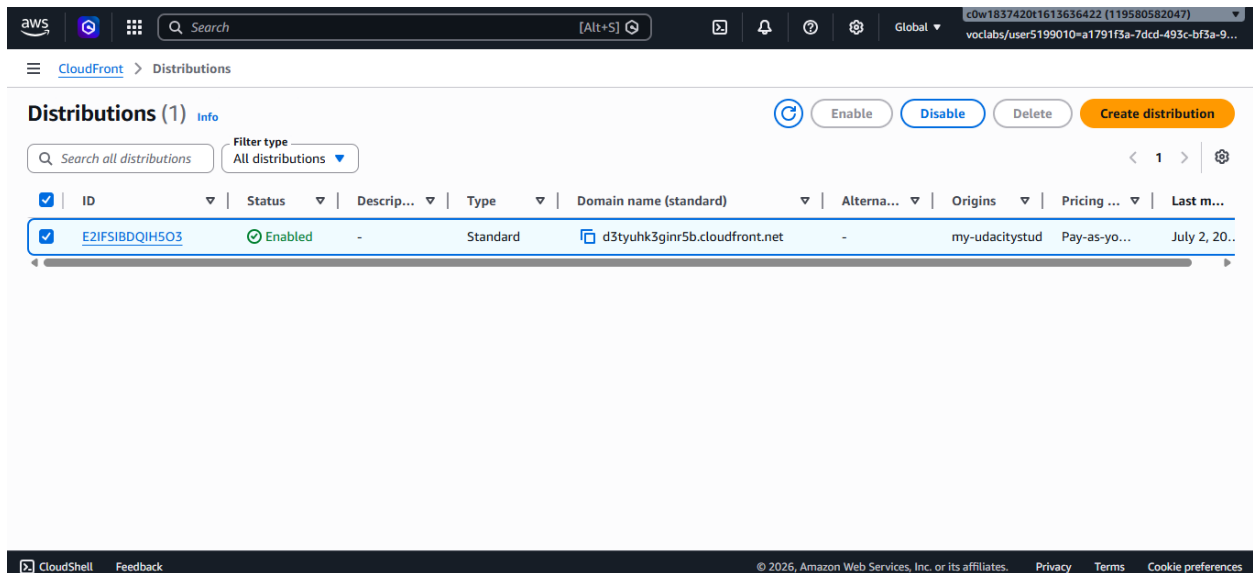

Description:

Created an Amazon CloudFront Distribution using the S3 Website Endpoint as the Origin.

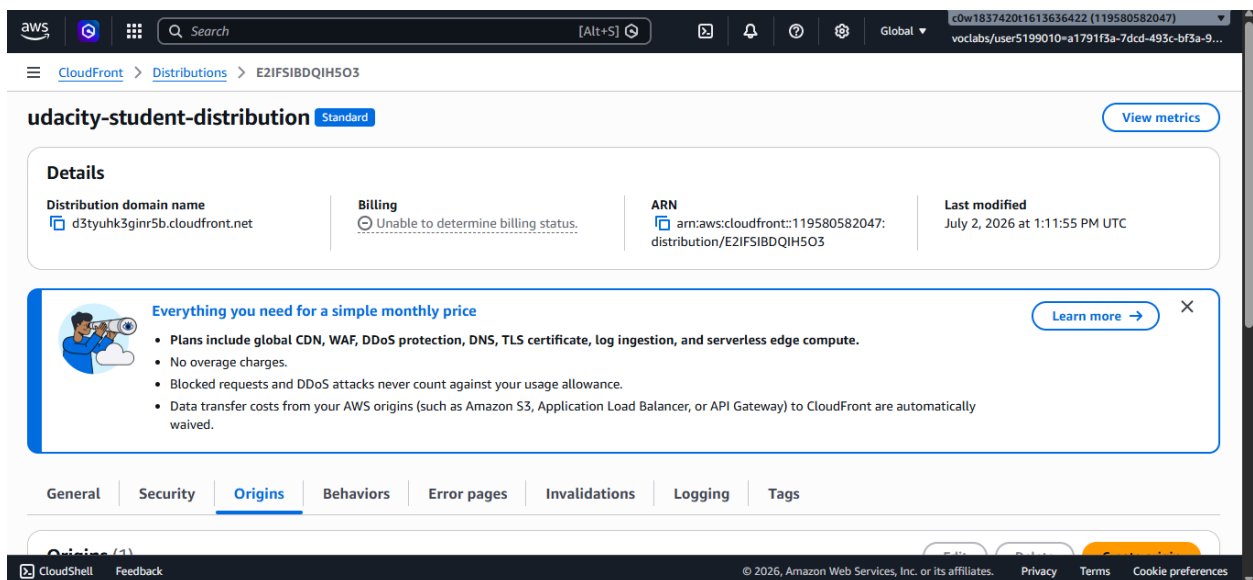

Configuration:

- Origin: S3 Static Website Endpoint
- Viewer Protocol Policy: Redirect HTTP to HTTPS
- Distribution successfully deployed

Screenshot: CloudFront Origin Configuration

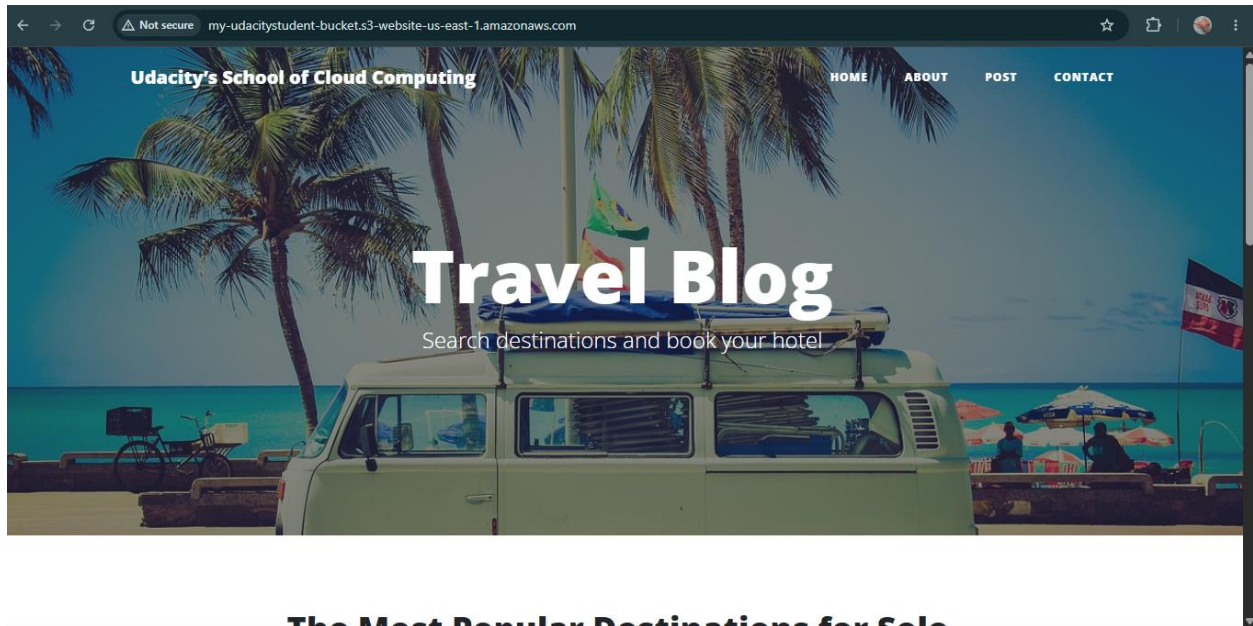

Web Browser Access

6. Website Access using S3 Endpoint

Description:

Successfully accessed the website using the S3 Static Website Endpoint.

Screenshot: Website opened using the S3 Website Endpoint

7. Website Access using CloudFront

Description:

Successfully accessed the website using the CloudFront Distribution URL.

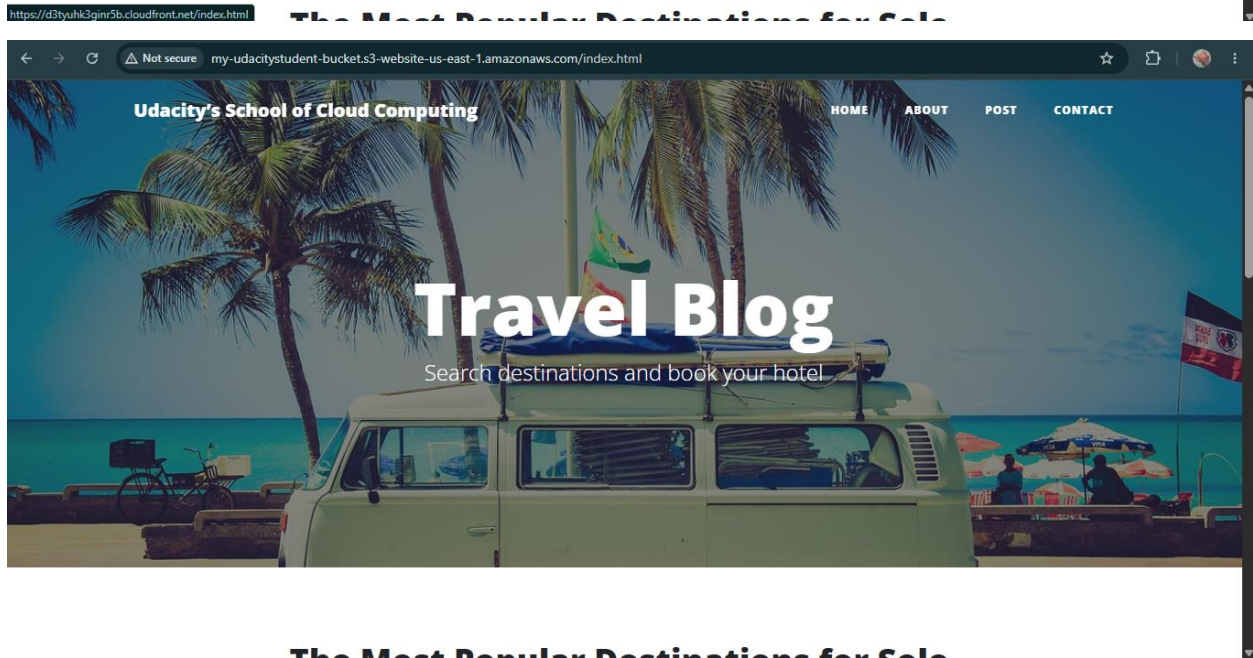

CloudFront URL:

<https://d3tyuhk3ginr5b.cloudfront.net>

Website Endpoint URL:

<http://my-udacitystudent-bucket.s3-website-us-east-1.amazonaws.com>

Screenshot: Website opened through CloudFront

Challenges Faced

- CloudFront deployment initially required several minutes.
- Encountered a **504 Gateway Timeout** error.
- Verified the S3 Website Endpoint and CloudFront Origin configuration.
- After deployment completed, the website became accessible successfully.

Conclusion

Successfully deployed a static website using Amazon S3 and Amazon CloudFront. The website is publicly accessible through both the S3 Website Endpoint and the CloudFront Distribution URL, fulfilling all project requirements.
